

The implementation of SNA93 and ERETES in Cameroon

Cameroon as well as most Francophone countries of sub-Saharan Africa carry out its national accounts as recommended by the System of National Accounts (SNA). It should be remembered that the process of implementation of different versions of the SNA has not always been easy due to certain constraints and certain characteristics related to country: progressive implementation of a statistical system, insufficient human and financial resources

Furthermore, Cameroon has been one of the pioneer countries of Sub-Saharan Francophone Africa to use the software ERETES for compiling national accounts. The paper presents the implementation of SNA93 and the use of the module ERETES for compiling national accounts in Cameroon.
