* Significance at the 10% level; ** significance at the 5% level and *** significance at the 1% level.
Notes: Robust standard errors clustered by employment area reported in parentheses. Columns (1) and (5) correspond to model 1, (2) and (6) to model 2. The dependent variable in (3) and (7) is the log variation of market non-tradable employment, while it is the log variation of non-market non-tradable employment in columns (4) and (8). All regressions include location fixed effects. Location fixed effects correspond to dummy variables for 22 regions of metropolitan France.
