Quality table for the Retail trade and automobile trade and repair Tendency Survey

CONTACT	
Country (Area)	France.
Survey	Retail trade and automobile trade and repair.
Service investigator	National Institute of Statistics and Economic Studies Economic Studies and National Accounts Directorate Short Term Economic Forecasts Department Business Tendency Surveys Division.
Reference year of data	2008.
Data of completion	March 2009.

METHODOLOGY	
Population Reference (Universe)	Legal units of the retail trade field. Around 300,000 firms (NACE rév. 2 divisions 45 and 47).
Sampling frame	Yearly exhaustive survey (exhaustive for retailers of 20 employees or more), called <i>Enquête Annuelle d'Entreprise</i> (EAE, Yearly Business Survey in retail trade.
Size of the actual frame list	40,000 firms
Characteristics of the frame list	Identification, address, NACE code, workforce size, turnover
Frame list update	Every year.
Sampling method	The sample is stratified by workforce and activity sector. The firms with more than 100 employees are automatically included. Updating every year. - sample cleaning: clearance of ceased or out of activity field firms; little companies with erratic answers are also eliminated while new big companies are included; - Sample increase: random drawing of firms according to a stratified sampling.
Sample size	3,750 units
Sample coverage	2% in number of firms, 55% in terms of turnover, 46% in terms of number of employees.
Sectors and/or categories currently covered	Retail trade and automobile trade and repair, except nearby food retail trade (surface under 400 m²), food specialized retail trade, flowers retail trade, second-hands goods retail trade and retail trade out of store (except mailing retail trade included in the survey field). According to NAF rév. 2 classification: 45, 47.1 (hors 47.11A, 47.11B, 47.11C), 47.3, 47.4, 47.5, 47.6, 47.7 (except 47.76Z), 47.91A, 47.91B.

Sample	Between 2 to 3 points of balance.
Sample	Detween 2 to 5 points of balance.
representativeness	
Response rate	Non-weighted response rate: 77% (annual average 2008).
	Weighted response rate (by turnover): 88% (annual average 2008).
Treatment of non-	"Constant sample" method: for qualitative questions, m-1
responses	survey response is carried forward to m survey in case of
•	non-response for this provisional operating. For m-1 survey
	definitive operating, an intermediate response between m and
	m-2 is attributed.
Weighting	Two-stage aggregation:
	- The first aggregation level leads to results at strata level.
	Within this first stage, individual responses to qualitative
	questions are weighted using the response of the
	surveyed to a yearly quantitative question concerning
	either turnover or the workforce, or else another activity
	variable, depending on the question; - At a second stage, strata average results are aggregated
	at less broken-up levels using weights computed from the
	Yearly Business Survey (EAE), using either turnover or
	the workforce, or else another activity variable, depending
	on the question.
	5 q. 5. 3. 5. 10. 11. 11. 11. 11. 11. 11. 11. 11. 11
Periodicity	Monthly.
Survey method	Postal mail or Internet data collection, since June 2007.
Fieldwork period	First 3 weeks of the current month
Timeliness	4 working days before the end of the month.
Remarks	The first results relating to month m are provisional. Revised
	results are released at the end of the next month. These
	definitive results take into account of late responses arrived
	after the first release.
